Grab a pencil and piece of paper.
How many words can you make
using the letters in “Heat Index”
We found 48 !

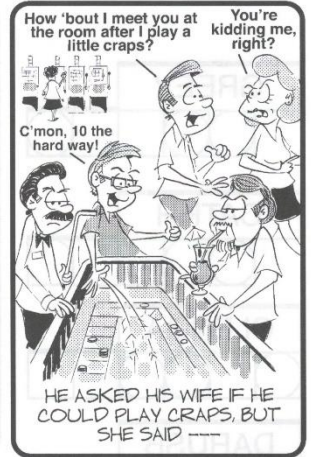

The heat index, also known as the apparent temperature, is what the temperature feels like to the human body when relative humidity is combined with the air temperature. This has important considerations for the human body's comfort. When the body gets too hot, it begins to perspire or sweat to cool itself off. When the heat index reaches 100 degrees or higher, it can be dangerous to be outdoors for any significant amount of time. Too much time spent in the heat and humidity can place you at risk for heat exhaustion and heat stroke.

JUMBLE

Unscramble these four Jumbles, one letter to each square, to form four ordinary words.

ZEOON
 TRIDY
 HECONS
 CEDIET

Now arrange the circled letters to form the surprise answer, as suggested by the above cartoon.

Likelihood of Heat Disorders with Prolonged Exposure or Strenuous Activity

- Caution
- Extreme Caution
- Danger
- Extreme Danger

Heat Index . The heat index is the "feels-like" temperature, or how hot it really feels when the relative humidity is factored in with the actual air temperature.

The heat index is forecast to rise to dangerous levels into this weekend, above 100 degrees in many cities from the Plains and Midwest to the East Coast.
